

XYZ Technologies — Code of Conduct

Synthetic internal knowledge-base document for the employee AI assistant

Important: This is synthetic content created for a college final-year project. It is not a real company's policy and is not legal, HR, medical, or security advice.

Integrity and Professional Conduct

Honesty — Operational Guidance

This section defines the XYZ Technologies approach to honesty within the area of integrity and professional conduct. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to honesty. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For honesty, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving honesty, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about honesty. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Policy field	Synthetic value
Document	XYZ Technologies — Code of Conduct
Section	Integrity and Professional Conduct
Topic	Honesty
Audience	Employees and authorized managers
Owner	HR / Workforce Operations
Status	Example policy for RAG testing

Scenario note: The employee assistant may retrieve this section when asked about honesty, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

Integrity and Professional Conduct

Professional Judgment — Operational Guidance

This section defines the XYZ Technologies approach to professional judgment within the area of integrity and professional conduct. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to professional judgment. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For professional judgment, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving professional judgment, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about professional judgment. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Employees should provide accurate information when requesting support related to personal relationships. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For personal relationships, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving personal relationships, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about personal relationships. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Policy field	Synthetic value
Document	XYZ Technologies — Code of Conduct
Section	Conflicts of Interest
Topic	Personal Relationships
Audience	Employees and authorized managers
Owner	HR / Workforce Operations
Status	Example policy for RAG testing

Scenario note: The employee assistant may retrieve this section when asked about personal relationships, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

Conflicts of Interest

Disclosure — Operational Guidance

This section defines the XYZ Technologies approach to disclosure within the area of conflicts of interest. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to disclosure. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For disclosure, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving disclosure, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about disclosure. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Employees should provide accurate information when requesting support related to devices. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For devices, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving devices, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about devices. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Policy field	Synthetic value
Document	XYZ Technologies — Code of Conduct
Section	Use of Company Resources
Topic	Devices
Audience	Employees and authorized managers
Owner	HR / Workforce Operations
Status	Example policy for RAG testing

Scenario note: The employee assistant may retrieve this section when asked about devices, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

Use of Company Resources

Accounts — Operational Guidance

This section defines the XYZ Technologies approach to accounts within the area of use of company resources. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to accounts. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For accounts, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving accounts, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about accounts. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Financial and Business Records

Expense Records — Operational Guidance

This section defines the XYZ Technologies approach to expense records within the area of financial and business records. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to expense records. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For expense records, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving expense records, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about expense records. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Policy field	Synthetic value
Document	XYZ Technologies — Code of Conduct
Section	Financial and Business Records
Topic	Expense Records
Audience	Employees and authorized managers
Owner	HR / Workforce Operations
Status	Example policy for RAG testing

Scenario note: The employee assistant may retrieve this section when asked about expense records, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

Financial and Business Records

Audit Cooperation — Operational Guidance

This section defines the XYZ Technologies approach to audit cooperation within the area of financial and business records. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to audit cooperation. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For audit cooperation, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving audit cooperation, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about audit cooperation. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.
