

# XYZ Technologies — Employee Policies Handbook

Synthetic internal knowledge-base document for the employee AI assistant

**Important:** This is synthetic content created for a college final-year project. It is not a real company's policy and is not legal, HR, medical, or security advice.

# Employment and Workplace Standards

## Working Hours — Operational Guidance

This section defines the XYZ Technologies approach to working hours within the area of employment and workplace standards. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to working hours. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For working hours, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving working hours, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about working hours. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Employment and Workplace Standards            |
| Topic        | Working Hours                                 |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about working hours, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Employment and Workplace Standards

## Probation — Operational Guidance

This section defines the XYZ Technologies approach to probation within the area of employment and workplace standards. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to probation. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For probation, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving probation, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about probation. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about employment records, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Employment and Workplace Standards

## Professional Standards — Operational Guidance

This section defines the XYZ Technologies approach to professional standards within the area of employment and workplace standards. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to professional standards. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For professional standards, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving professional standards, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about professional standards. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about medical leave, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Leave and Time Off

## Special Leave — Operational Guidance

This section defines the XYZ Technologies approach to special leave within the area of leave and time off. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to special leave. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For special leave, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving special leave, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about special leave. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Section      | Leave and Time Off                            |
| Topic        | Special Leave                                 |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about special leave, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Attendance and Timesheets

## Attendance — Operational Guidance

This section defines the XYZ Technologies approach to attendance within the area of attendance and timesheets. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to attendance. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For attendance, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving attendance, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about attendance. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Topic        | Attendance                                    |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about attendance, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Attendance and Timesheets

## Late Arrival — Operational Guidance

This section defines the XYZ Technologies approach to late arrival within the area of attendance and timesheets. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to late arrival. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For late arrival, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving late arrival, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about late arrival. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |

| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Attendance and Timesheets                     |
| Topic        | Timesheets                                    |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about timesheets, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Attendance and Timesheets

## Corrections — Operational Guidance

This section defines the XYZ Technologies approach to corrections within the area of attendance and timesheets. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to corrections. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For corrections, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving corrections, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about corrections. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

Employees should provide accurate information when requesting support related to hybrid work. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For hybrid work, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving hybrid work, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about hybrid work. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |

| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about hybrid work, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Flexible Work

## Work-From-Home Requests — Operational Guidance

This section defines the XYZ Technologies approach to work-from-home requests within the area of flexible work. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to work-from-home requests. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For work-from-home requests, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving work-from-home requests, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about work-from-home requests. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Flexible Work                                 |
| Topic        | Work-From-Home Requests                       |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about work-from-home requests, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Flexible Work

## Availability — Operational Guidance

This section defines the XYZ Technologies approach to availability within the area of flexible work. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to availability. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For availability, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving availability, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about availability. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Flexible Work                                 |
| Topic        | Availability                                  |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about availability, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Performance Management

## Goals — Operational Guidance

This section defines the XYZ Technologies approach to goals within the area of performance management. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to goals. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For goals, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving goals, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about goals. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |

| Section      | Performance Management                        |
| Topic        | Reviews                                       |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about reviews, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Performance Management

## Feedback — Operational Guidance

This section defines the XYZ Technologies approach to feedback within the area of performance management. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to feedback. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For feedback, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving feedback, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about feedback. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Performance Management                        |
| Topic        | Feedback                                      |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about feedback, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Performance Management

## Improvement Plans — Operational Guidance

This section defines the XYZ Technologies approach to improvement plans within the area of performance management. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to improvement plans. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For improvement plans, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving improvement plans, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about improvement plans. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

# Learning and Development

## Training — Operational Guidance

This section defines the XYZ Technologies approach to training within the area of learning and development. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to training. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For training, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving training, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about training. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

## Certifications — Operational Guidance

This section defines the XYZ Technologies approach to certifications within the area of learning and development. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to certifications. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For certifications, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving certifications, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about certifications. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

## Learning Plans — Operational Guidance

This section defines the XYZ Technologies approach to learning plans within the area of learning and development. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to learning plans. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For learning plans, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving learning plans, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about learning plans. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

## Reimbursement — Operational Guidance

This section defines the XYZ Technologies approach to reimbursement within the area of learning and development. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to reimbursement. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For reimbursement, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving reimbursement, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about reimbursement. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about access, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Employee Records

## Retention — Operational Guidance

This section defines the XYZ Technologies approach to retention within the area of employee records. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to retention. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For retention, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving retention, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about retention. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Employee Records                              |
| Topic        | Retention                                     |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about retention, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Employee Records

## Profile Updates — Operational Guidance

This section defines the XYZ Technologies approach to profile updates within the area of employee records. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to profile updates. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For profile updates, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving profile updates, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about profile updates. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

# Separation and Exit

## Handover — Operational Guidance

This section defines the XYZ Technologies approach to handover within the area of separation and exit. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to handover. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For handover, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving handover, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about handover. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Separation and Exit                           |
| Topic        | Handover                                      |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about handover, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Separation and Exit

## Asset Return — Operational Guidance

This section defines the XYZ Technologies approach to asset return within the area of separation and exit. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to asset return. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For asset return, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving asset return, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about asset return. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

|--------------|-----------------------------------------------|
| Document     | XYZ Technologies — Employee Policies Handbook |
| Section      | Separation and Exit                           |
| Topic        | Asset Return                                  |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about asset return, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Separation and Exit

## Final Settlement — Operational Guidance

This section defines the XYZ Technologies approach to final settlement within the area of separation and exit. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to final settlement. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For final settlement, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving final settlement, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about final settlement. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |

| Topic        | Final Settlement                              |
| Audience     | Employees and authorized managers             |
| Owner        | HR / Workforce Operations                     |
| Status       | Example policy for RAG testing                |

Scenario note: The employee assistant may retrieve this section when asked about final settlement, and may combine the retrieved policy with authorized employee-specific records before answering or initiating a supported workflow.

# Separation and Exit

## Notice Period — Operational Guidance

This section defines the XYZ Technologies approach to notice period within the area of separation and exit. The purpose is to provide employees with a consistent reference when using the employee assistant or the workforce platform.

Employees should provide accurate information when requesting support related to notice period. Current employee records, applicable approvals, and the latest published policy should be considered before a request is completed.

For notice period, the standard workflow is to review the applicable rule, validate the employee's current status, and then either provide guidance or route the request to the authorized workflow.

Managers and designated reviewers are responsible for decisions that require approval. The AI assistant may prepare or submit supported requests, but authorization controls remain with the workforce platform.

If an employee encounters an unusual case involving notice period, the employee should use the designated escalation channel. The assistant should explain the standard rule and identify when human review is required.

Illustrative scenario: an employee asks the assistant a question about notice period. The assistant retrieves relevant policy context, checks authorized employee data where necessary, and provides an answer grounded in the retrieved information.

AI workflow note: policy-dependent actions should not be executed solely from model-generated text. The application should validate inputs and permissions before changing any workforce record.

| Policy field | Synthetic value                               |
